

Bug Level Categories

Bug Level Categories

Bug Severity

- *Severity is defined as the **degree of impact** a defect has on the application being tested.*
- ***Testers determines** the severity level of a defect.*

Bug Severity levels

Severity Level	Criteria
Highest	<i>Application not starting, no workaround is available, data corruption, application abnormally terminates</i>
High	<i>Workaround is available, Function is not working according to specifications, severe performance degradation</i>
Medium	<i>Incorrect error messages, Noticeable performance inefficiencies</i>
Low	<i>Spellings, Grammatical errors,, cosmetic flaws(weakness)</i>

Bug priority

- *Priority signifies the **urgency** of **fixing** a defect*
- ***How fast a bug has to be fixed ?***
- ***Developers** and **business team** determines priority level.*
- *Maybe discussed in the grooming meeting*
- *Or in the “**Bug Evaluation**” meeting*

Bug Priority levels

Level	Criteria
Highest	<i>Immediate fix needed, block further testing, very visible</i>
High	<i>Must be fixed before the product is released</i>
Medium	<i>Should fix during the normal course of the development activities</i>
Low	<i>Would like fix but can be release as it is if needed</i>
